Federal Aviation Regulations/Aeronautical Information Manual Gleim

"This book prepares an airline pilot candidate in all areas relating to their desired occupation. Being an airline pilot demands a well-rounded candidate - someone who is skilled in the operation and handling of aircraft and of utmost professional and moral character. This book covers many of the technical areas for the airline transport pilot, while highlighting what it means to be an aviation professional. The Federal Aviation Administration (FAA) outlines the content required by the Airline Transport Pilot - Certification Training Program (ATP-CTP) in Advisory Circular (AC) 61-138. The ATP-CTP ground school must be completed prior to taking the ATP knowledge exam. This book covers all the topics required by this AC and provides practical advice on topics pertinent to a newly hired airline pilot including: aerodynamics with a focus on high altitude operations, stall prevention and recovery, and general upset recovery techniques for transport category aircraft; pertinent weather considerations with emphasis placed on abnormal weather conditions, icing, and severe weather avoidance; general operating considerations when working for an airline; physiological considerations, checklist procedures, operational control, handling equipment failures, operating turbine engines, transport category performance, and automation. Concludes with chapters dedicated to leadership and professionalism, crew resource management, safety culture. and regulations, including sleep and duty regulations as well as pertinent operating rules that differ from general aviation regulations."--Provided by publisher.

Being a safe pilot involves more than checking the weather, filing a flight plan, and performing a preflight inspection. It also requires that pilots assess their physical and mental health and evaluate a slew of situational factors. This valuable reference contains detailed FAA-approved recommendations for determining when a flight is a "no-go" and details the variables that go into such a weighty decision—including medications, fatigue, trapped gases, vision impediments, spatial disorientation, hypoxia, and carbon monoxide. Pilots will learn how to determine their personal minimums in flying, evaluate the benefits of LASIK surgery, and confidently handle in-air situations that could quickly become emergencies, such as smoke in the cabin

and altitude-induced decompression sickness.
