 Machining is an
 essential part of high-
 performance engine
 building and stock
 rebuilding, as well as
 certain servicing
 procedures. Although
 you may not own the
 expensive tooling and
 machining to perform
 all or any of the
 machining required for
 a quality build, you
 need to understand the
 principles, procedures,
 and goals for
 machining, so you can
 guide the machining
 process when
 outsourced. Classic
 and older engines
 typically require
 extensive machining
 and almost every
 major component of
 engine, including
 block, heads, intake,
 crankshaft, and
 pistons, require some
 sort of machining and

fitment. A detailed, authoritative, and thorough automotive engine-machining guide for the hard-core enthusiast has not been available until now. Mike Mavrigian, editor of Engine Building Professional, walks you through each important machining procedure. A stock 300-hp engine build has far different requirements than a 1,000-hp drag race engine, and Mavrigian reveals the different machining procedures and plans according to application and engine design. The author also shows you how to inspect, measure, and evaluate components so you can provide astute guidance and make the best machine work choices. Machining procedures included are cylinder

boring, align boring/honing, decking, valveseat cutting, cam tunnel boring, and a multitude of other services. In addition, multi-angle valve jobs, setting the valveseats, altering rocker arm ratio, re-conditioning connecting rods, and machining and matching valvetrain components are also covered. Whether you're an enthusiast engine builder or prospective machining student who wants to pursue a career as an automotive machinist, this book will provide insight and in-depth instruction for performing the most common and important machining procedures. **Chilton's Import Car Repair Manual** CarTech Inc Chilton has added another exciting
