MALDONADO MORA

six report of session 2010-12, Vol. 1: Report, together with formal minutes, oral and written evidence Oxford University Press, USA
 A basic problem in computer vision is to understand the structure of a real world scene given several images of it. Techniques for solving this problem are taken from projective geometry and photogrammetry. Here, the authors cover the geometric principles and their algebraic representation in terms of camera projection matrices, the fundamental matrix and the trifocal tensor. The theory and methods of computation of these entities are discussed with real examples, as is their use in the reconstruction of scenes from multiple images. The new edition features an extended introduction covering the key ideas in the book (which itself has been updated with additional examples and appendices) and significant new results which have appeared since the first edition. Comprehensive background material is provided, so readers familiar with linear algebra and basic numerical methods can understand the projective geometry and estimation algorithms presented, and implement the algorithms directly from the book.

The Work and Pensions Committee supports the Government's objectives for the incapacity benefit (IB) reassessment, which are to help people with disabilities and long-term health conditions to move back into employment, while continuing to provide adequate support for people who have limited capability for work or are unable to work. However, the report finds that the Government's positive messages about the IB reassessment are not getting through to the public. The report argues that that the Government should be more proactive in explaining its aims for the process and in emphasising the range of support which will be available. Current incapacity benefit claimants are being reassessed to decide whether they are able to work. The inquiry looked in detail at the Work Capability Assessment (WCA), the test which is used to assess whether an incapacity benefit claimant is capable of work, or work-related activity. WCAs are carried out by Atos Healthcare as part of a contract with the Department for Work and Pensions. It is widely accepted that the WCA was flawed, in the form in which it was introduced in 2008 for new ESA claimants, leading to a high proportion of inaccurate assessments and poor decisions by Jobcentre Plus. Many of these decisions were overturned at appeal. The report acknowledges that many welcome improvements have been made to the reassessment process as a result of the review by Professor Malcolm Harrington and the trial of the process carried out in Aberdeen and Burnley, before it was introduced nationally.

An awesome, globe-spanning, and New York Times best-selling journey through the beauty and power of mathematics. What if you had to take an art class in which you were only taught how to paint a fence? What if you were never shown the paintings of van Gogh and Picasso, weren't even told they existed? Alas, this is how math is taught, and so for most of us it becomes the intellectual equivalent of watching paint dry. In *Love and Math*, renowned mathematician Edward Frenkel reveals a side of math we've never seen, suffused with all the beauty and elegance of a work of art. In this heartfelt and passionate book, Frenkel shows that mathematics, far from occupying a specialist niche, goes to the heart of all matter, uniting us across cultures, time, and space. *Love and Math* tells two intertwined stories: of the wonders of mathematics and of one young man's journey learning and living it. Having braved a discriminatory educational system to become one of the twenty-first century's leading mathematicians, Frenkel now works on one of the biggest ideas to come out of math in the last 50 years: the Langlands Program. Considered by many to be a Grand Unified Theory of mathematics, the Langlands Program enables researchers to translate findings from one field to another so that they can solve problems, such as Fermat's last theorem, that had seemed intractable before. At its core, *Love and Math* is a story about accessing a new way of thinking, which can enrich our lives and empower us to better understand the world and our place in it. It is an invitation to discover the magic hidden universe of mathematics.

FRA Guide for Preparing Accidents/incidents Reports The Stationery Office

In this report the Public Administration Select Committee (PASC) concludes that, despite the positive steps implemented by the Statistics and Registration Service Act 2007 (the Act), there remain issues and concerns about the way government statistics are produced and disseminated which remain a genuine risk to public confidence in the statistical system and must be addressed. The Act was intended to ensure that statistics are produced to the highest professional standards and that effective governance structures are in place to protect transparency and accountability and the Committee found the Act had helped to improve the operation of the statistical system. However, the Act needs to have greater clarity and transparency in the way it operates and in the functioning of the UK Statistics Authority (the Statistics Authority). Those who regulate the quality of National Statistics are in the same organisation as those officials who produce data: the two groups should have a clear separation in practice, but this is hard to demonstrate when they work in the same building and share support services. It is also not appropriate that ministers should have lengthy prior access to certain statistics but other interested parties do not. The Statistics Authority does not seem to have sufficient control over the quality and integrity of the different data sets and statistical products produced by departments and their agencies. Planning and improving data access both within Government and for users outside Government should be given greater attention by the Statistics Authority, as well as by Government departments.

Helping people from workless households into work The Stationery Office

The costs of housing benefit currently makes up more than a tenth of the UK Government's expenditure on welfare, with costs forecast to reach £25 billion by 2014-15. The Government's policy on under-occupation came into force in April 2013 and it is estimated that 40,000 tenants in Wales will be affected; representing 46% of working age housing benefit claimants living in the social rented sector. This is the highest proportion of any region in Great Britain. There could therefore be a shortage of one and two bedroom homes in Wales to re-house everyone who wants to downsize. If local authorities are struggling to find alternative smaller accommodation for Government should undertake a speedy review of this policy. It is also increasingly urgent for the Welsh Government to continue with its house-building programme, with a particular focus on the building of smaller sized properties: obviously this is a long-term solution that would require additional resources. If no social housing is available, tenants may need to move to the private rented sector and private rental costs would need to be monitored. The costs of moving disabled households who require adaptations are also a concern. There may be a case for exempting disabled households from the policy. The Government's proposal to pay housing benefit direct to social tenants under Universal Credit may result in some tenants being unable to manage their rent payments. The Committee recommends that the Government provide for housing benefit to be paid direct to the landlords in certain circumstances, for example after a specified period of non-payment

Describes in general how scientists can use handwritten research notebooks as a tool to record their research in progress, and in particular the legal protocols for industrial scientists to handwrite their research in progress so they can establish priority of invention in case a patent suit arises.

Second Report of Session 2008-09 The Stationery Office

Despite some improvement in theatre utilisation, waiting lists and the length of time which patients have to wait for treatment in Northern Ireland remain the worst in the UK. Using operating theatres to their optimum could directly contribute to their reduction. Following on from a Northern Ireland Audit Office report (HCP 552, session 2002-03; ISBN 0102924333) published in April 2003, the Committee's report examines options for maximising operating theatre capacity and reducing waiting lists; better theatre management and control; and the shortage of theatre staff and the limited availability of beds.

Actuaries' Survival Guide SIAM

This book explains what actuaries are, what they do, and where they do it. It describes the ideas, techniques, and skills involved in the day-to-day work of actuaries. This second edition has been updated to reflect the rise of social networking and the internet, the progress toward a global knowledge-based economy, and the global expansion of the actuarial field that has occurred since the first edition. --from publisher description

Reconciling Europe and the Nation-state Finite Element Procedures

This book presents selected peer reviewed papers from the International Conference on Advanced Production and Industrial Engineering (ICAPIE 2019). It covers a wide range of topics and latest research in mechanical systems engineering, materials engineering, micro-machining, renewable energy, industrial and production engineering, and additive manufacturing. Given the range of topics discussed, this book will be useful for students and researchers primarily working in mechanical and industrial engineering, and energy technologies.

NHS Continuing Care The Stationery Office

If it's essential to project management... it's in here! The first edition of *The Project Management Answer Book* addressed all the key principles of project management that every project manager needs to know. With a new chapter on scrum agile, updates throughout, and many new PMP® test tips, this new edition builds on that solid foundation. The structure of this update maps closely to the PMBOK® Guide, Fifth Edition, and is designed to assist anyone studying for the PMP® and other certification exams. Helpful sections cover: • Networking and social media tips for PMs, including the best professional organizations, virtual groups, and podcast resources • The formulas PMs need to know, plus a template to help certification candidates prepare and self-test for their exams • Quick study sheet for the processes covered on the PMP® exam • Key changes in PMBOK® Guide, Fifth Edition, for readers familiar with earlier versions who want "the skinny" on the new version. PMs at every level will find real gold in the information nuggets provided in this new edition. Those new to project management will find the comprehensive coverage and the depth of the answers especially valuable, and will like the easy-to-read style and Q&A format. For experienced managers looking for new tools and skills to help them pass their PMP® or other certification exams, this is a must-have resource.
